About the Milbank Memorial Fund

The Milbank Memorial Fund is an endowed operating foundation that works to improve population health and health equity by collaborating with leaders and decision-makers and connecting them with experience and sound evidence.

We advance our mission by:

• Identifying, informing, and inspiring current and future state health policy leaders to enhance their effectiveness;

• Working with state health policy decision makers to advance primary care transformation and sustainable health care costs, and

• Publishing high-quality, evidence-based publications and The Milbank Quarterly, a peer-reviewed journal of population health and health policy.
Panelists

- **Margaret Flinter**, APRN, PhD, Senior Vice President and Clinical Director, Community Health Center, Inc./Moses Weitzman Health System
- **Yalda Jabbarpour**, MD, Director, The Robert Graham Center, and Scorecard lead author
- **Gary Price**, MD, President, The Physicians Foundation
- **Kyu Rhee**, MD, President and CEO, National Association of Community Health Centers

Moderated by **Frances Stead Sellers** of *The Washington Post*
What Is the Primary Care Scorecard?

• Co-funded by the Milbank Memorial Fund and The Physicians Foundation and developed with the American Academy of Family Physician’s Robert Graham Center, the second national Primary Care Scorecard identifies five reasons why access to primary care is worsening.

• The Scorecard is designed to assess the state of primary care nationally and across states, as well as progress on the recommendations in the 2021 National Academies of Sciences, Engineering, and Medicine (NASEM) report, Implementing High-Quality Primary Care: Rebuilding the Foundations of Healthcare.
The Health of US Primary Care: 2024 Scorecard Report

Yalda Jabbarpour, MD
Opinion | The shrinking number of primary-care physicians is reaching a tipping point

By Elisabeth Rosenthal

Primary care saves lives. Here’s why it’s failing Americans.

By Frances Seidel Selby
October 17, 2023 at 6:00 a.m. EDT

Why you can’t get in to see your primary care doctor. ‘It’s almost frightening.’

A wave of retirements, growing patient demand, and changing patterns of well visits are behind the crunch.

By Jessica Bartlett

Population Needs Are Not Being Met

Figure 1. The Percentage of the US Population Without a Usual Source of Care Is Rising (2012–2021)

Data Source: Analyses of Medical Expenditure Panel Survey data, 2012-2021.

Notes: Usual source of care (USC) ascertained whether that is a particular doctor’s office, clinic, health center, or other place where the individual usually goes when sick or in need of health advice. No usual source of care includes those who reported no usual source of care and those who indicated the emergency department as their usual source of care.
No One Can See You Now

1. The primary care workforce is not growing fast enough to meet population needs

2. The number of trainees who enter and stay on the professional pathway to primary care is too low and too few have community-based training

3. The United States continues to underinvest in primary care

4. Technology has become an added burden to primary care

5. Primary care research to identify, implement and track novel care delivery and payment solutions is lacking
Workforce

Figure 2. The Number of Primary Care Physicians per Capita Is Falling (2012–2021)

Notes: Primary care specialties included family medicine, general practices, internal medicine, geriatrics, pediatrics, and osteopathy.
Figure 3. The Number of Primary Care Clinicians (Physicians/NPs/PAs) per Capita Is Rising (2016-2021)

Notes: Primary care specialties included family medicine, general practices, internal medicine, geriatrics, pediatrics, and osteopathy. Estimates of nurse practitioners and physician assistants working in primary care were calculated and are included in this figure. (See Appendix for detailed methodology.)
Figure 5. Primary Care Clinician Density Is Highest in High-Need Areas (2016-2021)

Notes: Primary care specialties included family medicine, general practice, internal medicine, geriatrics, pediatrics, and osteopathy. Estimates of nurse practitioners and physician assistants working in primary care were derived and are included in this figure. (See Appendix for detailed methodology.)
Figure 6. Growth in the Number of Primary Care Residents per Capital Is Not Keeping Pace with Other Specialties (2012–2021)

Data Source: Analyses of Accredited Council of Graduate Medical Education program-level data to get counts for medical residents and Area Health Resource File for the population data, 2012–2021.

Notes: Primary care specialties included family medicine, internal medicine, geriatrics, and pediatrics.
Figure 7. Only 15% of Physicians Actually Entered Primary Care Practice in 2021

Data Source: Analyses of the 2023 American Medical Association Historical Residency File, the 2023 American Medical Association Masterfile, and the 2012–2021 Centers for Medicare and Medicaid Services Physician and Other Practitioners data.

Notes: Primary care specialties included family medicine, general practice, internal medicine, geriatrics, pediatrics. Specialty for doctors of osteopathy (DOs) are not always included in the American Medical Association Masterfile, so these data may be an underestimation of the true workforce. (See limitations in Appendix for more details.)
Data Source: MEPS

Definitions: Primary Care Spend (calculated for the US and 29 states)

- Primary Care Spend Narrow – Primary care physicians (family physicians, general practitioners, pediatricians, geriatrichians, internists)
- Primary Care Spend Broad – Primary care physicians, nurse practitioners, physician assistants, psychiatrists, mental health non-physicians and OB-GYNs
Figure 9. Primary Care Spending (Narrow Definition) Remains Low Across All Insurers (2012–2021)

Data Source: Analyses of Medical Expenditure Panel Survey data, 2012–2021.
Notes: The primary care narrow definition is restricted to primary care physicians only. Primary care specialties included family medicine, general practices, internal medicine, geriatrics, pediatrics, and osteopathy.
Digital Health

Data Source: Analyses of 4,261 family physicians who sought continuing certification from American Board of Family Medicine during 2022 and who reported providing direct patient care.

Notes: A total of 2,117 respondents completed the EHR Usability questions.
Figure 12. Federal Research Investment in Primary Care Was Nearly Nonexistent (2017–2022)

Notes: Federal investment includes spending from the National Institutes of Health (NIH), the Centers for Disease Control and Prevention, the Agency for Healthcare Research and Quality, and the Food and Drug Administration. Funding given to family medicine departments was used as a proxy for funding to primary care.
Why Can’t Anyone See You Now?

- Insufficient workforce
- Not enough trainees choosing primary care
- Lack of investment to support teams
- Digital health that adds to workload instead of supporting primary care
- No support to study models of care delivery and payment solutions
