The importance of lobbying transparency was highlighted to me when I attended the UN Conference of Parties (COP27) in Egypt as an observer last November. Companies and others must be open about which government policies they are supporting.

- Message from the CEO, Shell plc

In Nigeria:

- Shell is an executive council member of the **Nigerian Gas Association (NGA)**.¹⁴² InfluenceMap rates it E+, highly misaligned with the Paris Agreement, saying it “appears to advocate [for] a long-term role for fossil gas in the energy mix.”¹⁴³

ACCR notes that NGA’s vision is “effectively advancing the role of Nigerian Natural Gas as the preferred energy source”.¹⁴⁴ It claims to have successfully lobbied to increase exploration, consumption, and export of gas,¹⁴⁵ and Nigeria’s proven reserves of 200 trillion cubic feet provide “huge potential for growth” and could be tripled if properly explored.¹⁴⁶ It does not state if this would be Paris aligned.

OCTAGONAL WARNING LABELS PERFORM BEST
IN IMPROVING THE CAPACITY OF CONSUMERS TO MAKE HEALTHIER FOOD DECISIONS IN JAMAICA

The Ministry of Health and Wellness of Jamaica, the University of Technology, Jamaica, and the Pan American Health Organization conducted a randomized controlled trial to examine the best performing front-of-package labelling (FOP) in Jamaica. The study is the first to take place in the Caribbean and contributes to the evidence that has been accumulated in the region of the Americas.

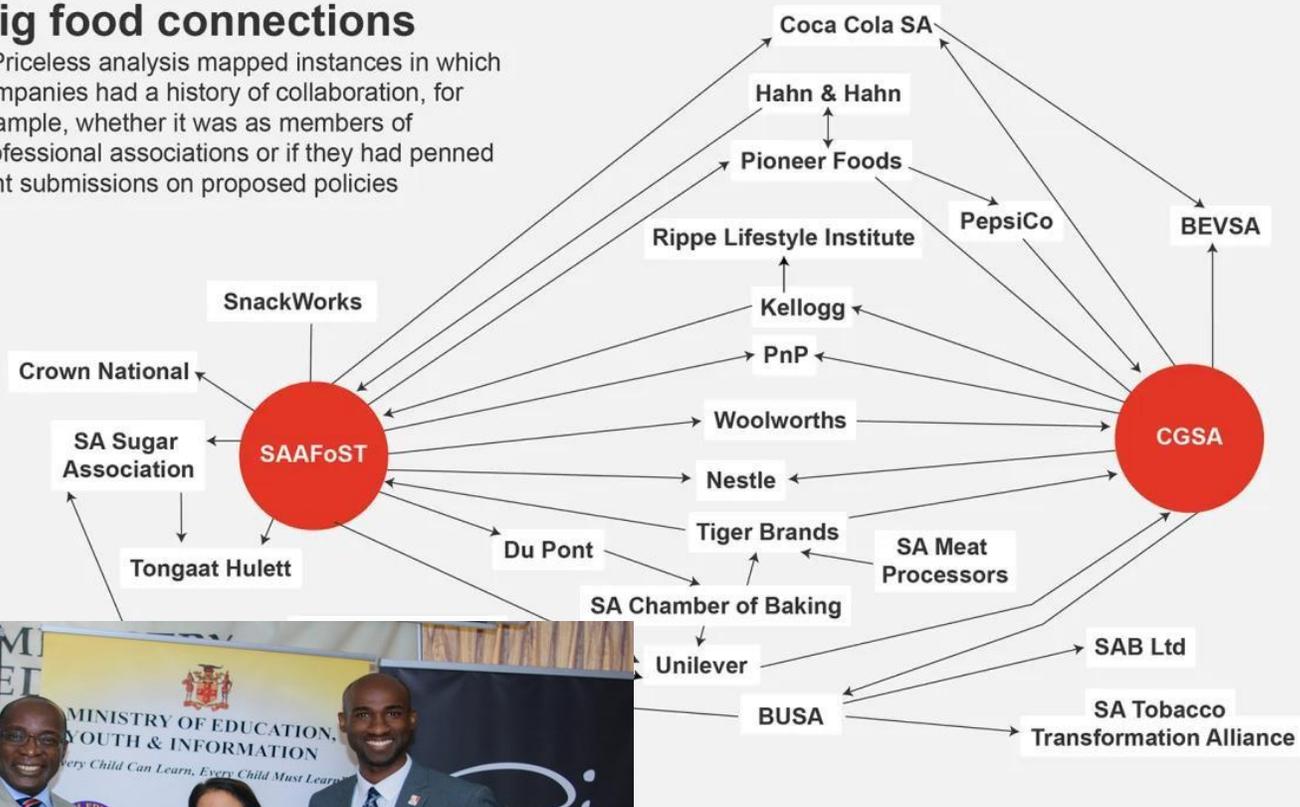

Methods

A total of 1,206 adult shoppers at popular supermarkets across Jamaica of varying socioeconomic and education status, gender, and age participated in the study. They were randomly placed in one of four groups (see figure above). Interviews took place between December 2020 and February 2021 in nine parishes countrywide.

The FOP schemes were applied to mock-up products presented in a random order to successive respondents, who were asked to: (i) select the option they would buy; (ii) select the least harmful option; and (iii) identify the nutrients that were in excess in the products.

Big food connections

A Priceless analysis mapped instances in which companies had a history of collaboration, for example, whether it was as members of professional associations or if they had penned joint submissions on proposed policies

Public participation subverted

We all want our governments to be accountable for how they make their decisions. The problem is that harmful industries can influence governments and hide it.

Contesting framing of problems and solutions: Analysis of food industry framing in WHO consultations

Some commonalities in responses to WHO consultations:

- Regulation too simplistic
- Self-regulation preferable
- Restricting engagement harmful
- WHO overstepping mandate
- In some cases responses almost identical across a range of trade groups

A range of government or industry-led initiatives claim a "responsible business" mantle

Launched in March 2011, the [public health responsibility deal](#) was established to tap into the potential for businesses and other organisations to improve public health and tackle health inequalities through their influence over food, alcohol, physical activity and health in the workplace.

The Business of Health Equity: The Marmot Review for Industry

by Institute of Health Equity, Legal & General

Harmful product manufacturers contest responsibility for harms

"Problem gambling is complex and is about the person not the specific product." Gala Coral, 2014

"If all consumers exercised, did what they had to do, the problem of obesity wouldn't exist." PepsiCo CEO, 2010 interview

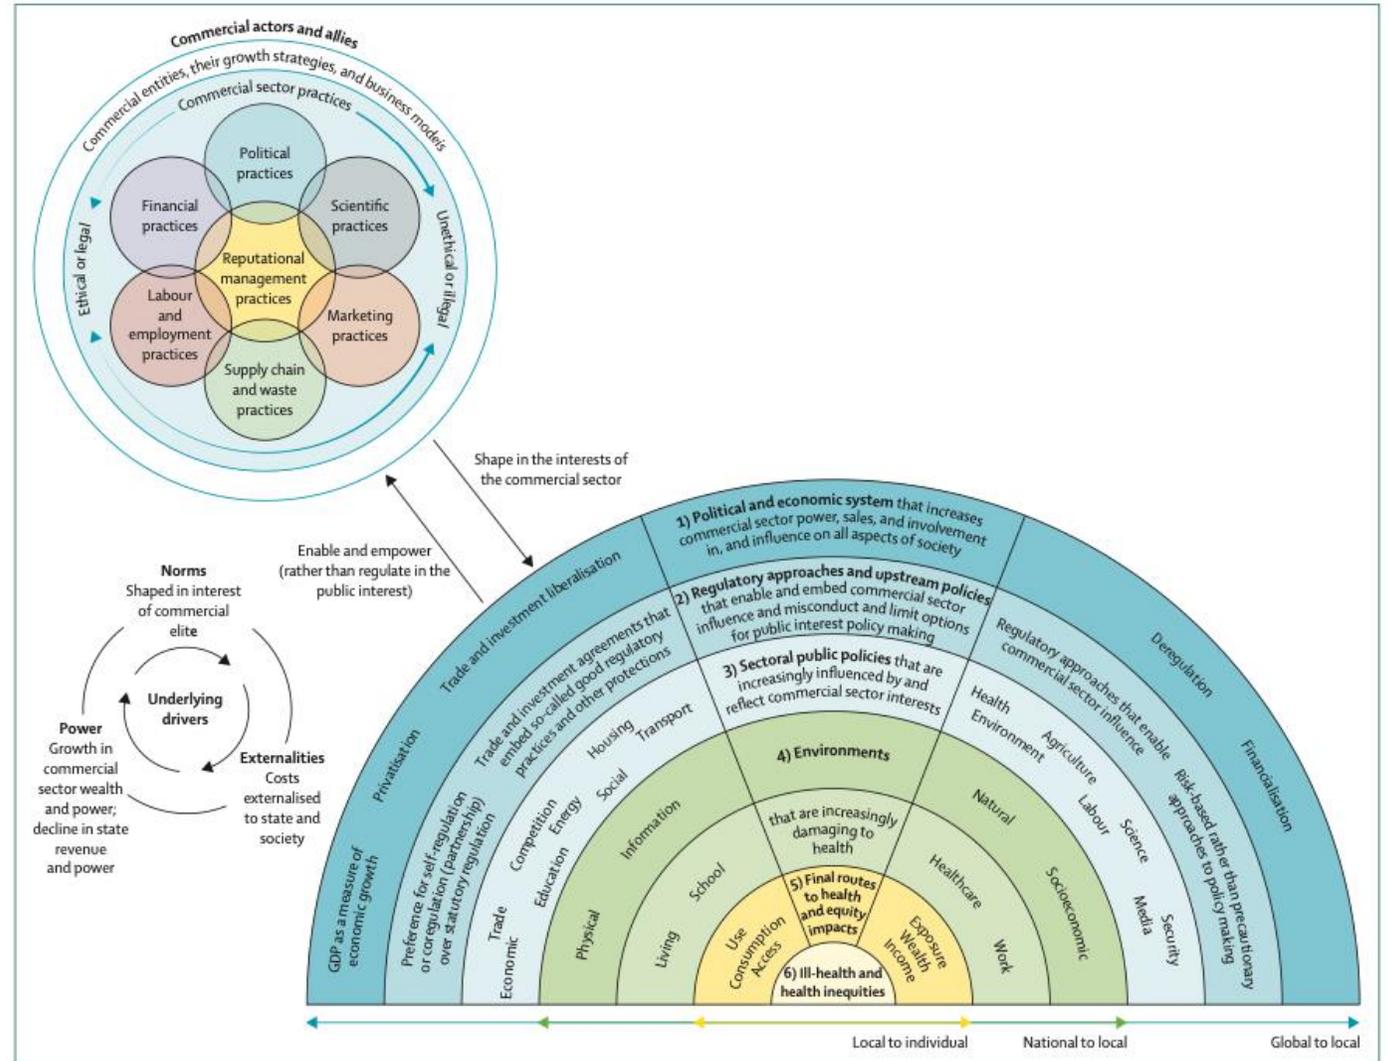

"Our brands are made with pride, and made to be enjoyed—responsibly. Consumed moderately and responsibly by adults who choose to drink, alcohol can be part of a balanced lifestyle." Diageo US, Leadership in Alcohol in Society article, 2016

"We are all to blame".. "demand driven" Oreskes et al, 2021

"Lately, many Americans, myself included, have witnessed an erosion of personal responsibility." CEO of Daniel Defense, maker of the firearm in the Uvalde elementary school shooting, testimony, House Committee on Oversight and Reform

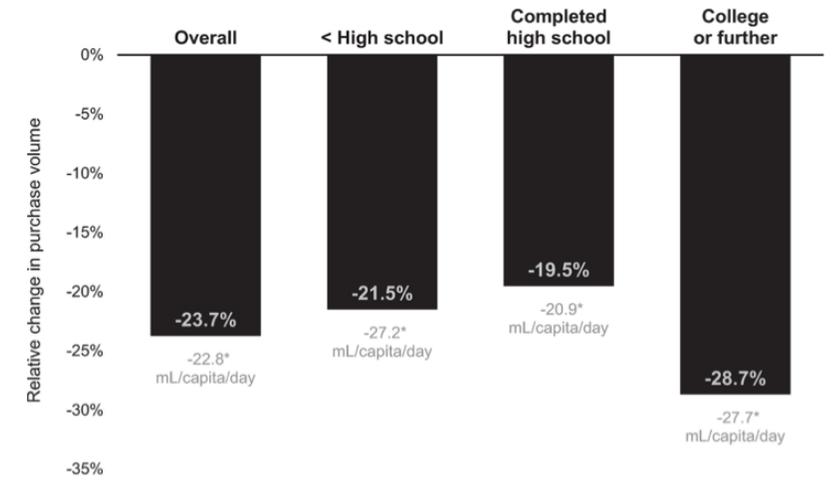

Challenge of ascribing moral agency

- Corporations operate within wider regulatory and economic systems
- Fundamentally driven by profit, competition and related goals Pitfalls of ascribing agency
 - Consistent with notions of social responsibility and partnership
 - Could distract from moral responsibility of society, governments
 - Could distract from meta-regulation

Antecedent political conditions

- Examining political and social origins of institutions as a component in successful policy in relation to CDoH
- Moral responsibility as residing with policy-makers
 - Greater focus on revolving doors, partnerships and policy coherence
 - Making meta-regulation an explicit manifesto
- “To govern is to choose”

Antecedent Social Conditions

- What shapes the rise of civil society's interests, incentives, and strategies for pursuing policies and laws that establish the regulatory institutions within which industries operate?
- How can civil society be supported, strengthened, and protected to hold policy-makers to account in changing the systems in which companies operate?

Summary

- Caution in ascribing moral responsibility to corporations
- Understanding political and social antecedents may provide additional insight into the upstream drivers of regulatory policies constraining industry policy influence
- This may help in efforts to re-balance power towards where moral agency lies and holding policy-makers accountable
